

Statement of Intent

We strive to foster a healthy curiosity in our students about our universe and promote respect for the living and non-living. Throughout the key stages, the students will acquire and develop a broad, rich knowledge as well as the skills required to enquire about the world around us, through practical experiences, conducting experiments, building arguments and explaining concepts confidently. Cross-curricular opportunities enable students to make links between the classroom and the real world. Students are encouraged to ask questions and be curious about their surroundings and a love of science is nurtured.
